

React: Life Cycle Methods

React – Countries of the world

The following exercise contains the following subjects:

- Class component
- Life Cycle Methods

Instructions

Let's call this API endpoint when the component mounts to the screen

<https://restcountries.eu/rest/v2/all>

to get the list of countries in the world.

Display all the countries in a simple list. A user is able to filter the countries from an input.

Simple [demo here](#)

Think of what kind of state you need and what kind of components you need to accomplish this.
